Lightweight balance burn-down and sparkline style

A Figma-ready kit for Stream detail when product supports remaining funds or time-to-depletion. Low-clutter fintech clarity, cautious chain-state language, and no trading-view behavior.

max 3 pale colors | color + dash patterns | no 3D | mobile sparkline | pending inclusion annotation

Remaining funds over time

Estimate updates after wallet and chain-observed activity refresh.

1,200 XLM
available now

Accrued | Remaining | Review threshold

Pending chain inclusion

Mobile sparkline

Latest value + one helper line; no trading view.

640 XLM
may need review around Jun 18

Table fallback

Figma note: pair every chart with table fallback annotation; do not expose Stellar price conversion in v1.

Not in scope: D3/chart code, Stellar price conversion, trading-chart interactions, or guarantees about chain finality.

States, accessibility fallback, and deferred frame

Use this page as the Figma handoff companion for edge cases, mobile behavior, and product TBD decisions.

A11y table fallback

Date	Remaining	Accrued	Status
May 01	1,200 XLM	0 XLM	Active
May 15	640 XLM	560 XLM	Active
Jun 01	120 XLM	1,080 XLM	Review soon

Annotate in Figma: chart data must be available through a semantic table or aria-described summary in implementation.

Edge states

Empty	Not enough stream activity to chart yet.
1-point	Show one labelled point; no trend line.
Loading	Skeleton follows final chart bounds.
Error	Retry with human-readable copy.

Deferred for MVP

Use this Figma frame if remaining-funds or time-to-empty is not committed for v1.

Rationale: needs product-approved data source and lifecycle semantics.

Mobile behavior

- Prefer compact sparkline and latest value.
- Allow horizontal scroll if full chart is required.
- Keep expand/table/retry targets at least 44 x 44 px.
- No animated draw-on line by default.

Design crit required: one product stakeholder + one engineering stakeholder. Implementation remains separate frontend backlog work.
