S StreamPay

Design-only handoff

Recovery

This page could not be found / 404

The link may be old, incomplete, or no longer available. You can head back to StreamPay home and keep working from there.

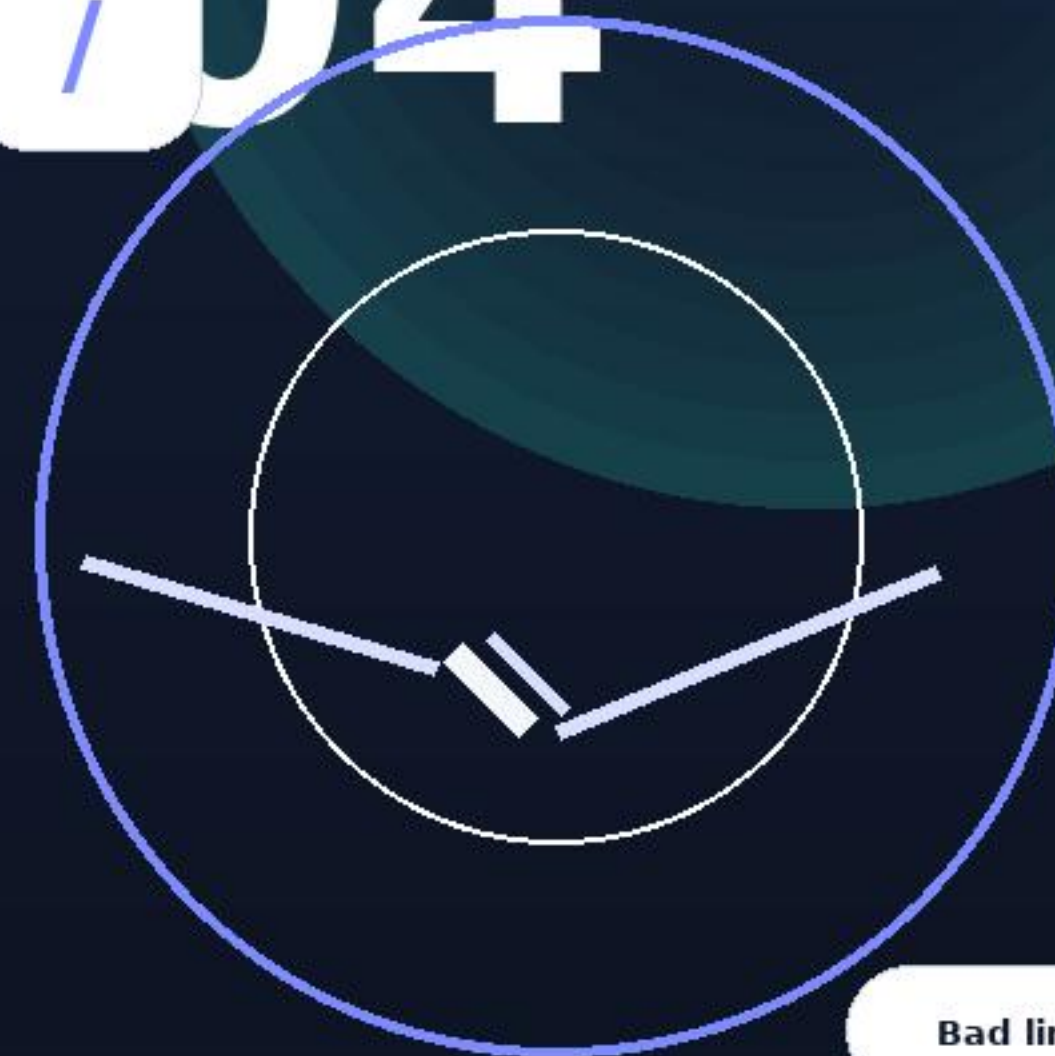

[Go to home](#)

[Contact support](#)

If you followed a link from an email or shared document, ask for a fresh link.

Why this looks different

404 is framed as a pathing problem, not a system failure. The lighter accent and broken-link illustration keep the tone calm.

Bad link

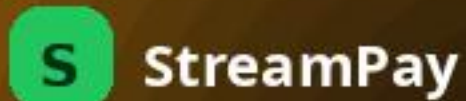

Stream lifecycle context

[Draft](#) — [Active](#) — [Paused](#) — [Ended](#)

A11y note

Heading is first content in main after the visible-on-focus skip link.
Primary action receives the first actionable focus stop.

Recovery

Something went wrong on our side

StreamPay is having trouble loading this page right now. Our team is already looking into it.

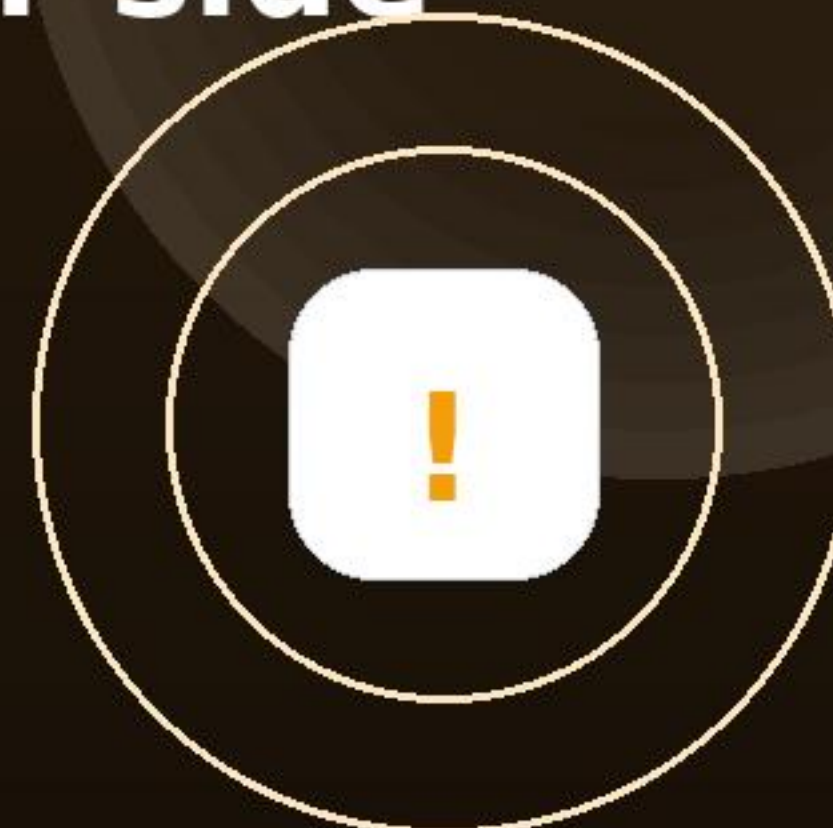

Try again

Visit status page

If this keeps happening, support can help with the page you were trying to reach.

Why this looks different

5xx uses a warmer service-owned accent and explicit ownership language so users know StreamPay is working on the issue.

We're fixing it

Use ownership language here. Do not redirect blame to the user.

Stream lifecycle context

Draft

Active

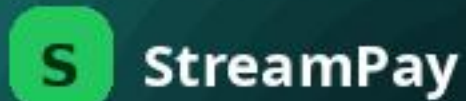

Paused

Ended

Do not show

Stack traces, internal hostnames, raw request IDs, vendor names, or database errors.

Design-only handoff

Recovery

Stellar service is temporarily unavailable

StreamPay cannot reach part of the Stellar service right now. Your funds are not gone. Recent activity may take longer to refresh until the service is back.

Try again

Contact support

You can also check the [status page](#) for live updates.

Why this looks different

The network motif signals an upstream dependency, while the copy reassures users without exposing Horizon or Soroban internals.

Funds reassurance note

Say funds are not gone. Do not say safe forever, guaranteed, or instantly recoverable.

Ally note

Status and recovery meaning come from heading + body + actions, not the teal network illustration alone.

Stream lifecycle context

Draft — Active — **Paused** — Ended

Optional mobile variant

Compact recovery layout for the Stellar service unavailable frame. Keep the same copy hierarchy and action order on small screens.

Mobile annotation

Status page is used as the secondary action here because it is more compact than support while preserving recovery context.
