EXECUTIVE SUMMARY

Payment streams should feel steady and inspectable.

This review pack frames StreamPay v1 as a calm Stellar-fintech dashboard for creating, tracking, settling, and withdrawing scheduled payments. It avoids promising Soroban, escrow, or vesting behavior until product and engineering sign off.

Draft — Active — Paused — Ended

WHAT	**Scheduled payment agreement that accrues over time with visible rate, status, and next action.**
POSITIONING	**Wallet-connected money movement, asset/trustline awareness, and ledger-visible activity.**
GUARDRAILS	**No smart-contract, escrow, vesting, or final-timing guarantees until v1 scope is approved.**

Reference basis: project copy, design QA docs, and official Stellar developer language. All mock data is fake.

Fake wallet data

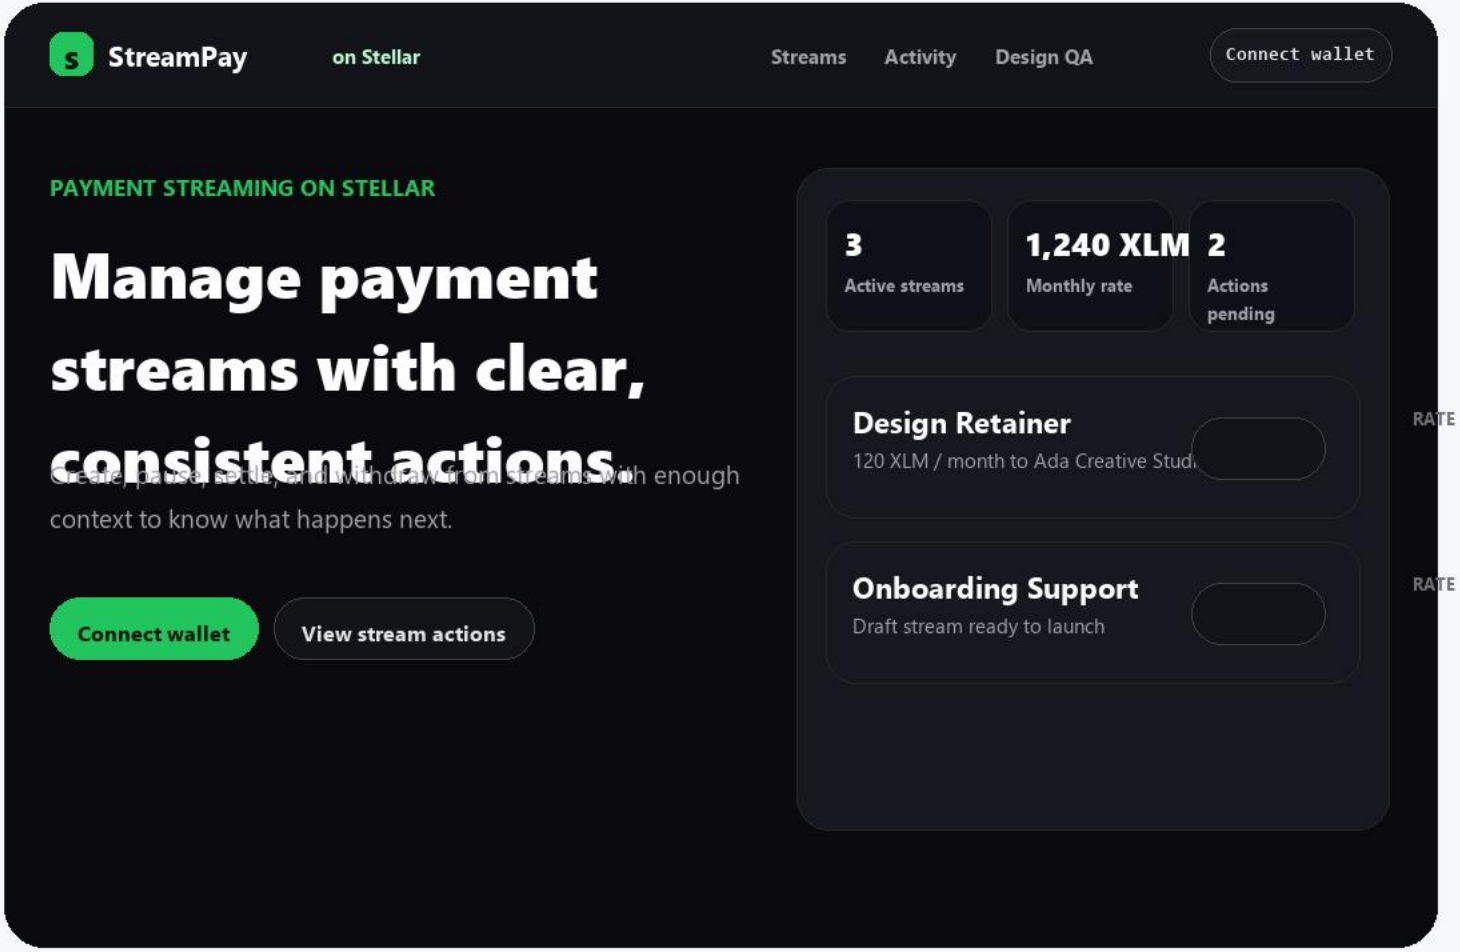
REVIEW INTENT

Explain the product without marketing heat.

Primary job: connect a Stellar wallet and orient users to stream actions.

Non-designer checks

- Clear value prop
- Wallet state
- Lifecycle labels
- AA contrast pass



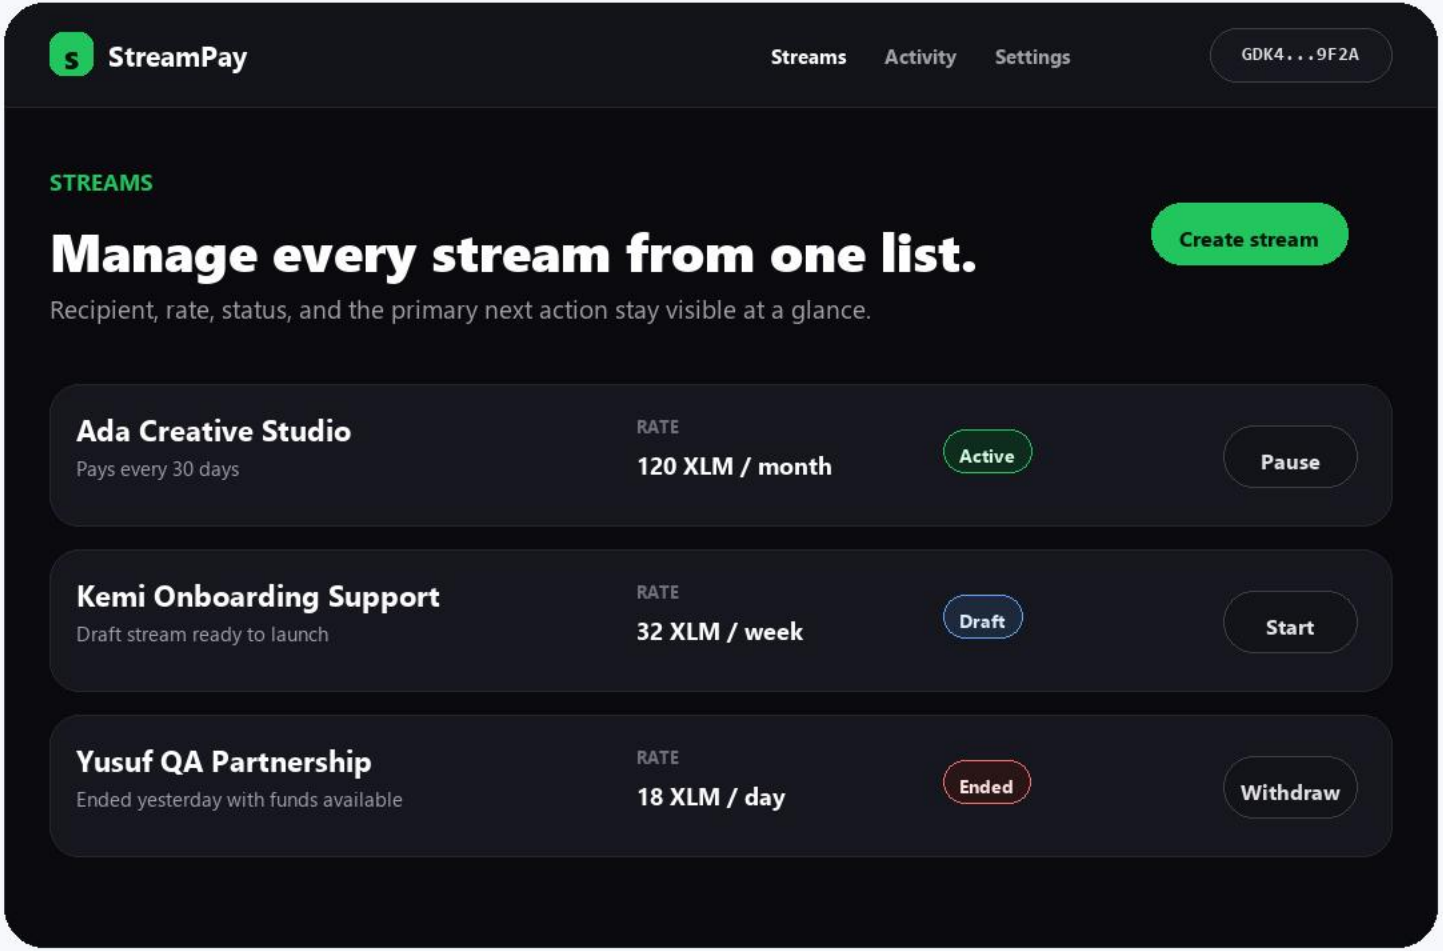
REVIEW INTENT

Make the next money-adjacent action scannable.

The list keeps recipient, rate, status, and primary action visible without exposing raw chain detail.

Non-designer checks

- Populated
- Empty
- Loading
- Network error



REVIEW INTENT

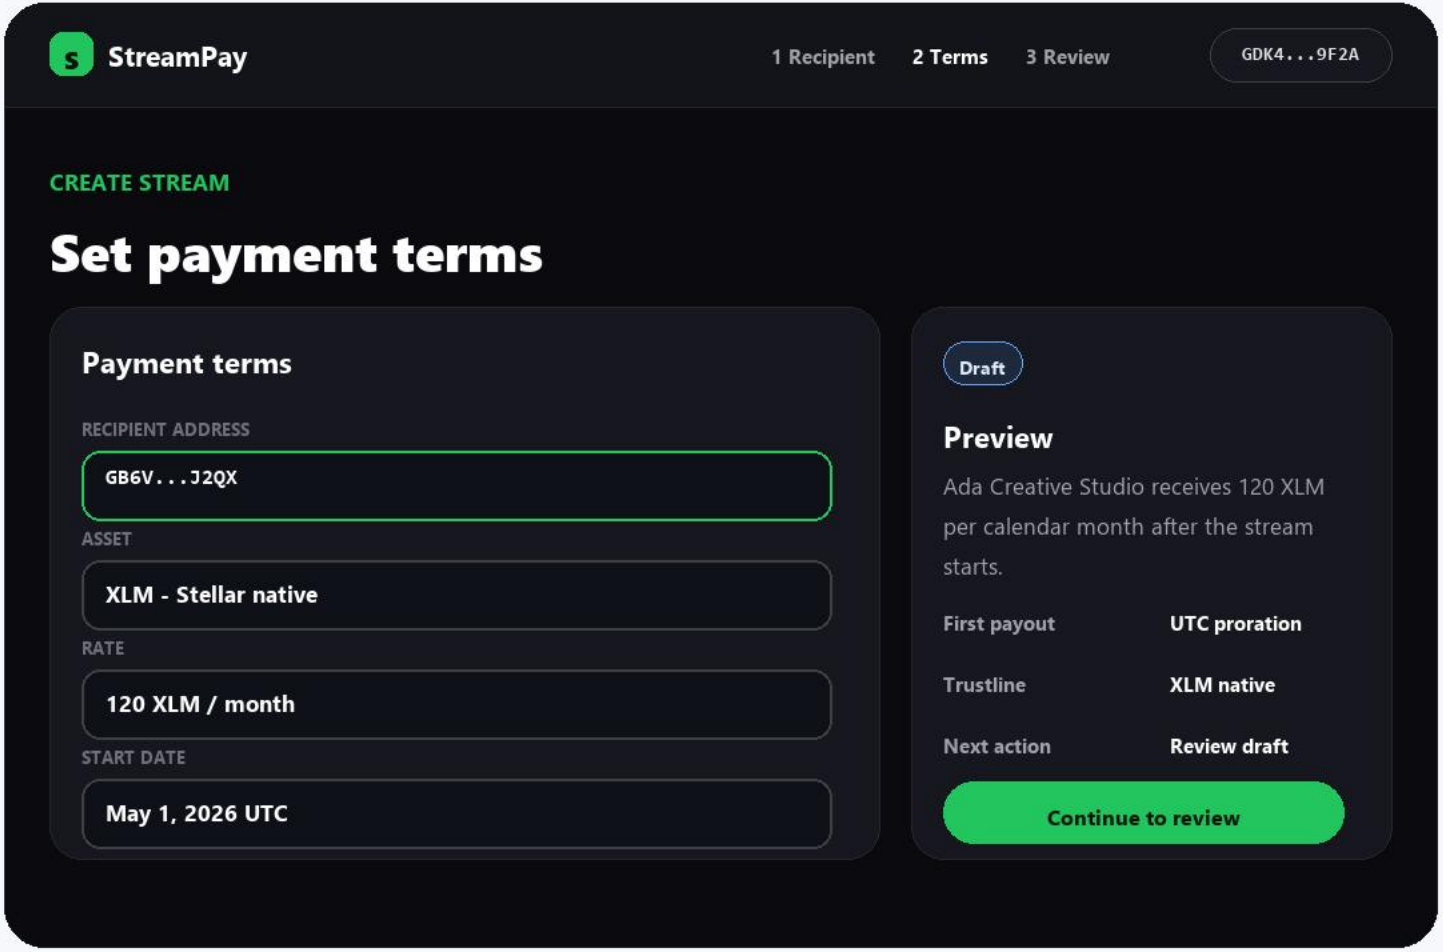
Prevent bad setup before funds move.

Use plain validation for asset format, recipient account, trustline status, and schedule before launch.

Non-designer checks

- Labels
- Focus ring
- Errors
- 44px targets

Every input has label, focus, error text, and disabled state documented in Figma.



REVIEW INTENT

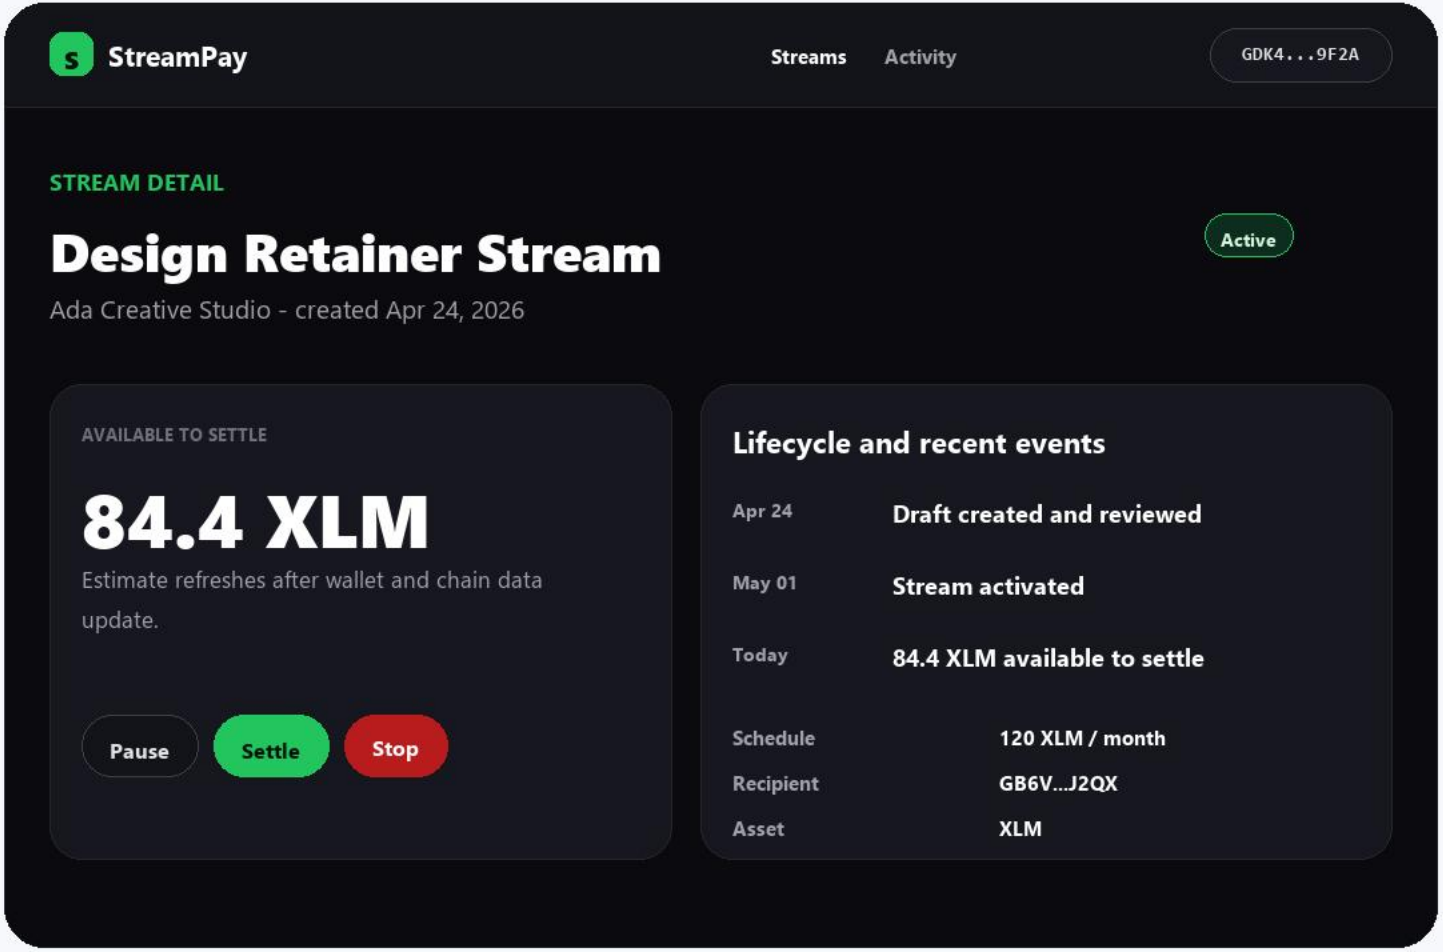
Show balance, lifecycle, and the right next action.

The detail view separates reversible actions from irreversible money actions.

Non-designer checks

- Balance
- Timeline
- Action grouping
- Copy guardrail

Avoid guaranteed, instant, or smart-contract claims unless product has signed off.



REVIEW INTENT

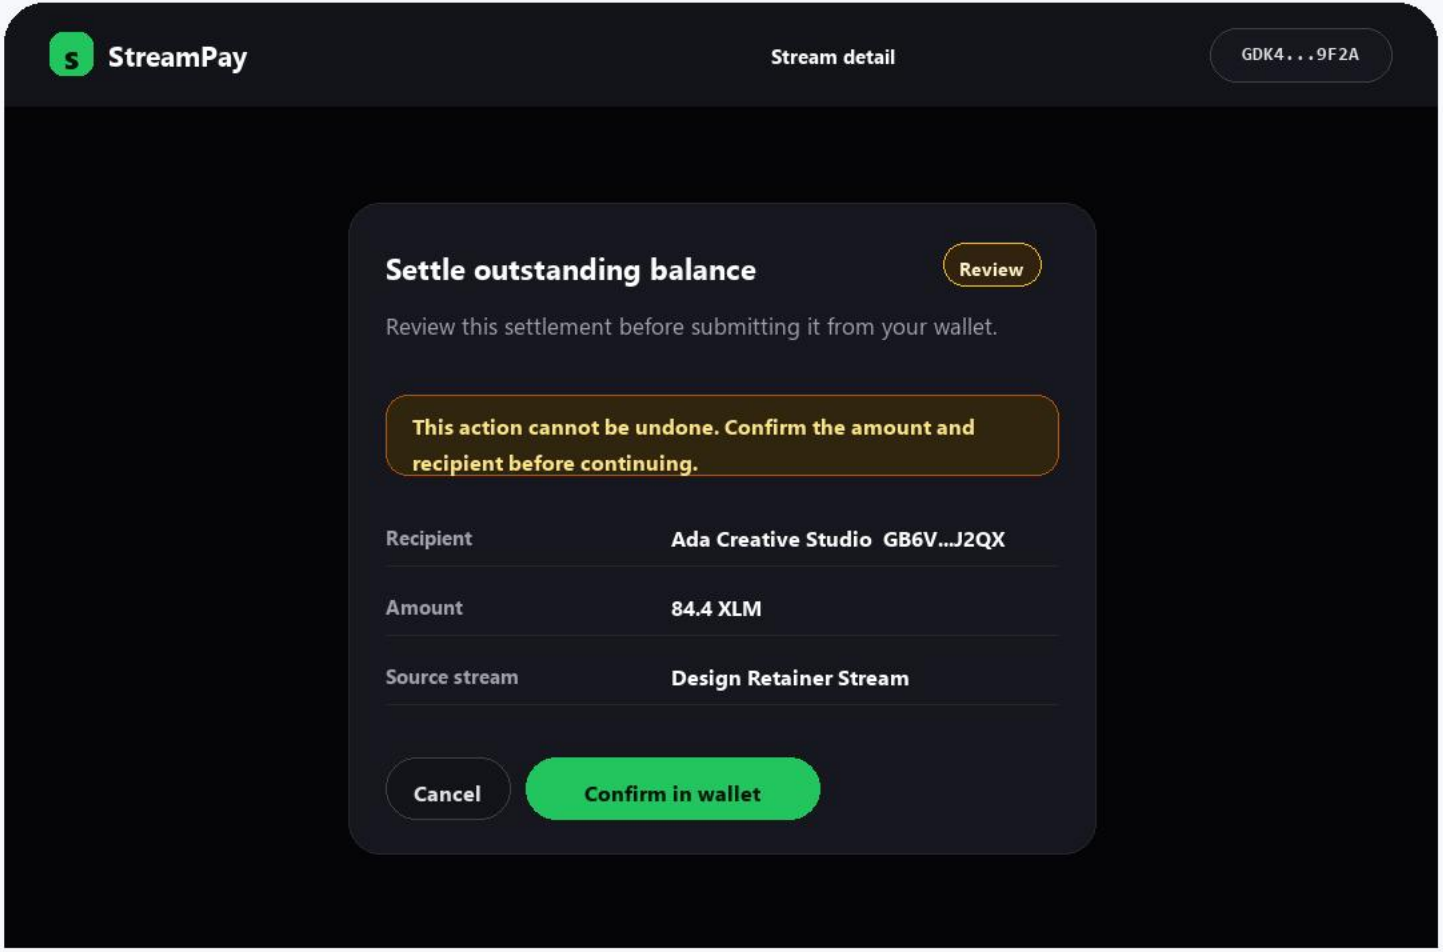
Slow the user down before final actions.

Amount, recipient, asset, and warning copy are visible before submission.

Non-designer checks

Default · Submitting · Success · Error

Copy says pending or submitted, never guaranteed complete before confirmation.



REVIEW INTENT

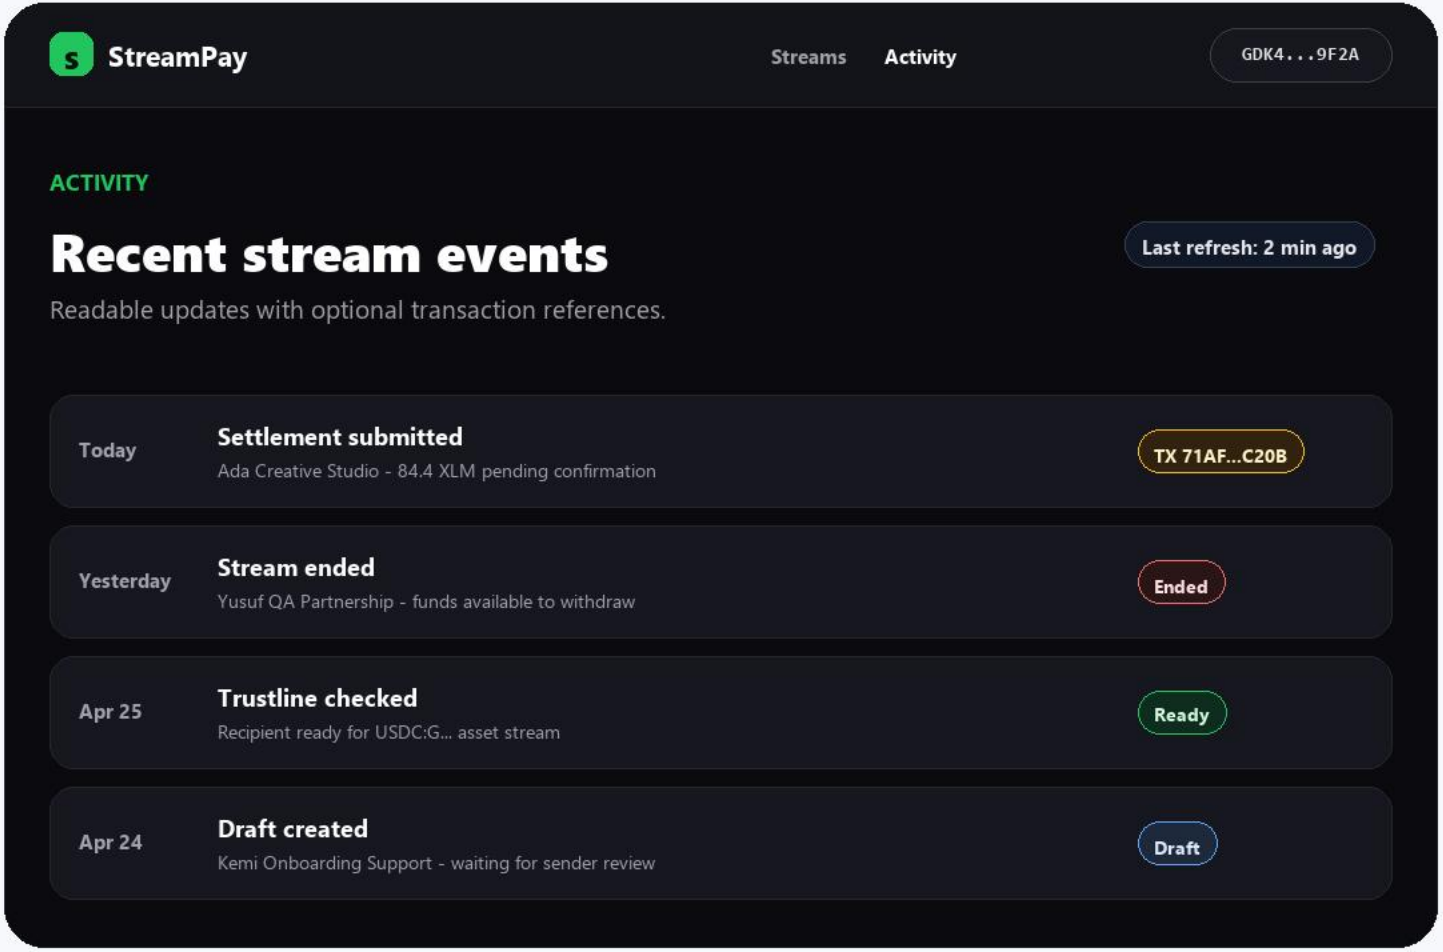
Let users inspect what happened.

Activity shows readable events first, with expandable transaction or ledger references when available.

Non-designer checks

- Readable event
- TX reference
- Refresh timestamp
- No SLO

Users can see when StreamPay last refreshed wallet or chain-observed activity; no timing guarantee is



OPEN PRODUCT ITEMS

Keep Soroban-related claims minimal until sign-off.

AREA	CURRENT PACK WORDING	DECISION NEEDED
Soroban Smart contracts	Marked as pending product/engineering sign-off.	Is a Soroban contract path in v1, or future/backlog only?
On-chain escrow Funds custody	UI says available, pending, and settle; it does not claim final enforcement behavior.	Which values come from contract reads, Horizon/ledger, or local state?
Vesting Schedule type	Out of v1 in this pack unless product adds it explicitly.	If included, define vesting model, copy, and lifecycle states.

Handoff checklist

- Named PDF export plus eight PNG previews.
- Redlines/specs: 8px grid, 44px targets, labels, focus ring.
- States: empty, loading, error, success, draft/active/paused/ended.
- WCAG quick contrast pairs pass; prototype keyboard review still needed.
- Design crit requires one product and one engineering stakeholder.
- No Next.js implementation included.

Official references for wording: Stellar Docs on assets, Horizon, and Soroban smart contracts. No mock value represents real user data.
