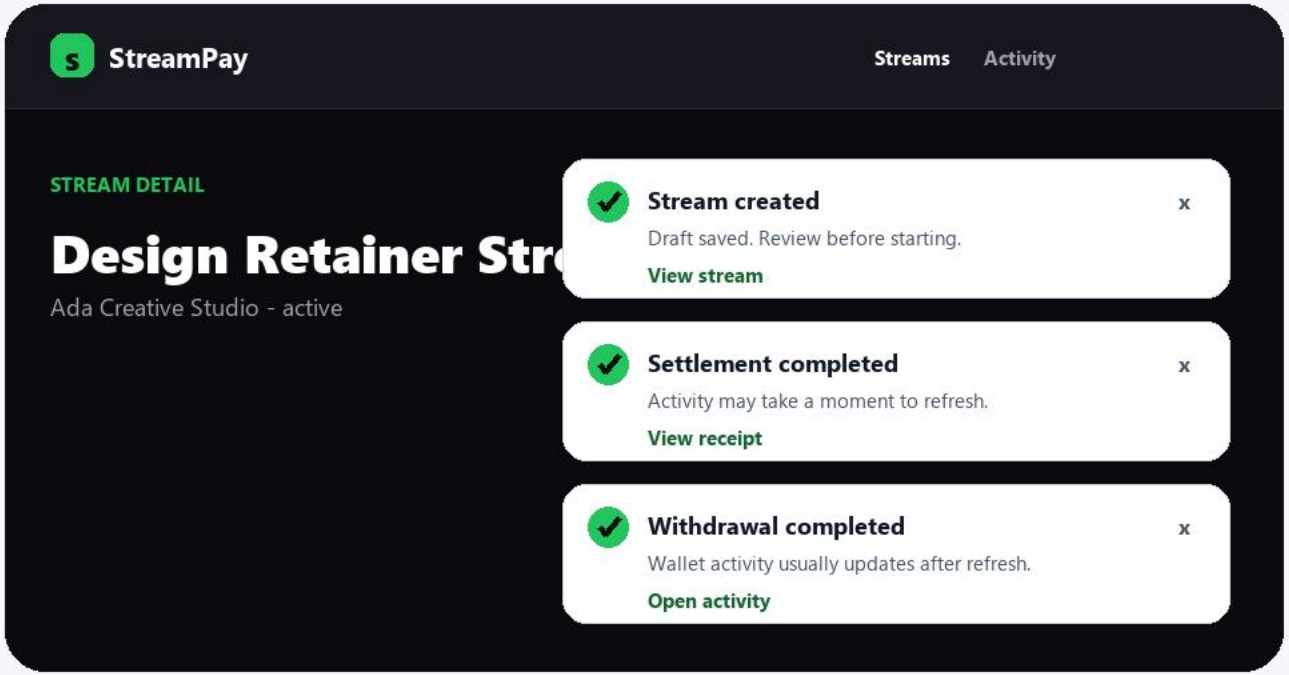
Inline success toasts

Use inline patterns when the user can keep working. Toasts announce the outcome and offer a next action without stealing focus.

role=status | polite live region | not color alone | dismiss target | no exact timing promise

When to use

- Stream created while staying in flow.
- Settlement confirmed on detail.
- Withdrawal complete with activity link.
- No receipt required in the moment.



Copy handoff: move final wording into a separate frontend issue; this PR is Figma/static design only.

Full-page or blocking confirmations

Use blocking patterns when the milestone deserves a receipt, a clear next step, or confirmation that a money-adjacent flow is complete.

receipt-like | amount + recipient | ledger placeholder | calm success | clear next action

Stream created

The stream is ready to start. Review details before any funds move.

Amount	120 XLM / month
Recipient	Ada Creative Studio

Review stream | Activity

Settlement complete

This may take a moment to appear in chain-observed activity.

Amount	84.4 XLM
Recipient	Ada Creative Studio

View receipt | Activity

Withdrawal complete

Wallet activity usually updates after StreamPay refreshes status.

Amount	84.4 XLM
Recipient	Ada Creative Studio

Open activity | Activity

Soroban/contract receipt lines are TBD until contracts and API behavior are final.

Delayed confirmation after submitted success

Use this frame when local submission succeeds but Horizon or chain-observed confirmation is delayed. It is not an error unless product defines the failure condition.

failure-after-success edge | status not error | refresh status | view activity | Soroban TBD

Submitted. Confirmation is taking longer than expected.

We will keep checking and show the latest status in Activity. This may take a moment to appear after wallet and chain-observed activity refresh.

Do not promise finality or exact timing until product/legal signs off.

Refresh status | View activity

Figma accessibility annotations

- Toast: role=status, aria-live=polite.
- Success mark is paired with text label.
- Do not rely on green alone for success.
- Dismiss and action targets are at least 44 x 44 px.
- Blocking modal traps focus; full page uses main heading.
- Delayed confirmation remains a status until failure is defined.

Design crit required: one product stakeholder + one engineering stakeholder. Static storyboard can be attached in issue closeout.
